

FOR IMMEDIATE RELEASE

## **BOLD NORTH AUDIO RELEASES ONLY SOFT DOME TWEETER DESIGNED & ASSEMBLED IN AMERICA**

**NOVEMBER 10, 2020 – ST. PAUL, MN** – Today American audio solutions manufacturer, MISCO, announced the introduction of the BDT-2901, a high performance 29mm soft dome tweeter to add to its growing line of premium and high-performance drivers, all designed and manufactured under the Bold North Audio™ brand in its St. Paul, Minnesota facility.

The only soft dome tweeter currently produced in the US, the BDT-2901 (P/N 78036) is fully Klippel verified using state of the art Klippel Laser Scanning Vibrometry and QC testing equipment, and the Near Field Scanner to optimize the design. This ultra-low distortion tweeter combines a unique inductance modulated neodymium magnetic circuit with a high-quality silk dome manufactured by Dr. Kurt Müller GmbH & Co. KG in Germany along with a large back-chamber to allow a for cross-over below 1kHz.

The tweeter was designed in response to customer requests for a high performance 29mm dome tweeter with both excellent performance and repeatable quality, one that would be produced in the USA to avoid issues with tariffs and ongoing trade disputes.

“The marketplace is accustomed to high-end tweeters being only produced by the Scandinavian suppliers”, said MISCO CEO Dan Digre. “With most global tweeter production today being done in Asia, more customers have asked us to design and manufacture a high-end home audio and studio monitor here in the US. Globally, US driver manufacturing is held in high regard, so we expect this tweeter and all of the Bold North Audio speakers to do well internationally. It’s time for some fresh air in the high-end tweeter marketplace.”

The BDT-2901 is offered on MISCO's website. International distribution is available for customers outside the USA.

The BDT-2901 tweeter is part of the expanding new brand of ultra-premium component loudspeakers called Bold North Audio™. The Bold North Audio world-class performance is rooted in fundamental scientific research, careful materials selection, precision manufacturing and most of all, love of music. Products under development include ultra-premium quality woofers, midrange, and tweeters.

This new brand is aimed to meet the needs of pro audio companies, recording studios, branded high-end HiFi speaker system manufacturers, and advanced DIY hobbyists.

### **About MISCO**

Seventy-one years ago (1949) Cliff Digre started the Minneapolis Speaker Company – now MISCO. A son of Norwegian immigrants who settled in Minnesota, his vision for the little company was bold—to challenge the traditional loudspeaker industry with more creative solutions and superior client service. Today MISCO® is recognized as a global leader in OEM loudspeaker manufacturing. Well established as a supplier to manufacturers in varied markets such as Military, Medical, Aerospace, Mass Transit, Pro Audio, and others. MISCO is one of the few remaining US speaker companies to have resisted off-shore migration of electronics companies.
