

FOR IMMEDIATE RELEASE

## Celestion Introduces the 32 ohm AN2075 Compact Array Driver

*New Addition to the AN Series is Capable of a Full-range Frequency Response, While Being Incredibly Compact and Lightweight*

Ipswich, UK (March 24, 2021) —[Celestion](#), one of the world's leading suppliers of professional loudspeakers and compression drivers for sound reinforcement

applications, is pleased to announce the new 32 ohm version of the [AN2075](#), a low profile 2-inch compact array driver, particularly well-suited for large-scale mini-array applications which require multiple drivers connected together. The new 32 ohm AN2075 joins others in the Celestion AN range of compact and lightweight full-range neodymium loudspeakers that are a popular choice for portable or discreet, low-profile sound reinforcement applications.

The new 32ohm AN2075 driver, in common with the rest of the range, utilizes an efficient neodymium magnet assembly and features a stiff and light aluminium cone that remains rigid to higher frequencies in order to deliver a smoother response. All the drivers in the AN Series have been built using a tough but lightweight glass-reinforced ABS chassis, designed for maximum free air movement, with a square mounting frame to facilitate close coupling of multiple units. And each of the drivers in the AN Series has been optimized using Finite Element Analysis

[www.Celestion.com](http://www.Celestion.com)

(FEA) techniques to give a wider dispersion characteristic than conventional loudspeakers of this size.

The entire Celestion AN Series affords systems designers the ability to build into their space-efficient products some of the principal advantages offered by line array designs. This includes a more even distribution of the acoustic signal and the ability to project sound over greater distances.

Features of the AN Series include:

- Full range frequency response from a very compact and lightweight driver
- Superb performance as a result of advanced Finite Element Analysis techniques used for acoustic, mechanical and electromagnetic modelling
- Optimised for applications such as portable line arrays where actively controlled wavefront (beam steering) is used
- Wider dispersion output to higher frequencies than many equivalent compact, full-range drivers on the market
- Square mounting frame to facilitate close coupling of multiple units
- Stiff and light aluminium cone remains rigid to higher frequencies, delivering a smoother response in the critical listening band
- Half roll elastomer surround provides damping for unwanted resonances and sustained centring control at extremes of excursion
- Weather resistant for outdoor applications

### **About Celestion**

With worldwide headquarters in Ipswich, England, Celestion design, develop and manufacture premium guitar and bass loudspeakers, and high-quality professional audio drivers for sound reinforcement. These world-renowned speakers are used onstage and in clubs, theatres and other venues the world over. Contact Celestion at: [info@celestion.com](mailto:info@celestion.com) and visit us on Facebook at [www.facebook.com/celestion](https://www.facebook.com/celestion).
